

Universal Asset Bridge Money (UABM)

Project Whitepaper - Version 1.0 | September 2026

Overview

Universal Asset Bridge Money (UABM) is an independently issued ERC-20 token deployed on Ethereum Mainnet. The project provides a transparent on-chain token that can be transferred between compatible Ethereum addresses and interacted with through supported wallets and decentralized applications.

Token Details

Name	Universal Asset Bridge Money
Symbol	UABM
Network	Ethereum Mainnet
Standard	ERC-20
Total Supply	1,000,000,000 UABM
Decimals	18
Contract	0xE5a35eDDe129075cAE2F3bD096Aa762b0285cd27

Purpose and Functionality

UABM is intended as an Ethereum-based digital token for on-chain transfers, wallet interaction and decentralized application interoperability. Token ownership and transfers are recorded by the Ethereum network according to the deployed smart contract.

Supply and Smart Contract

The smart contract created a fixed initial supply of 1,000,000,000 UABM with 18 decimals. The published contract address should always be independently verified before interaction. The verified smart-contract source is available through Ethereum block-explorer services.

Decentralized Exchange Liquidity

UABM may be exchanged through decentralized exchange liquidity where available. Liquidity depth, exchange rates, slippage and availability can change and are determined by on-chain market conditions. The existence of a liquidity pool does not establish a guaranteed market value for UABM.

Project Leadership

Founder / Project Lead: Muhammad Maqsood

Responsible for project deployment, public project information, website administration and ongoing development. Official project contact: contact@uabmtoken.com.

Risk and Independence Notice

UABM is an independent token. It is not USDT, Tether, fiat currency, or a representation of guaranteed price or redemption value. Availability, pricing, liquidity and support on wallets, exchanges, decentralized exchanges or other services are determined by those services. Users should verify the official contract address and independently assess transaction, smart-contract, market, liquidity and network risks.
